

ERP Enterprise (LN)

ERP Enterprise (LN)

ERP LN is the most powerful and comprehensive system available for managing the demands of complex manufacturing, distribution, and service industries. Its deep functionality gives you unparalleled control over the complexities of your global operations, you get a business solution designed to support your unique processes, from executive decision-making to the most detailed engineering requirements. In addition, LN's innovative technology brings you new levels of usability and connectivity, so that you're ready to grow your business profitably and adapt to change quickly.

ERP LN is designed to help you master the complexities of your manufacturing supply chain. Its rich capabilities mean that you can expect it do what you need today, and deliver value for the lifetime of your investment. You'll have a better fit for your requirements, flexibility to change as you need to, and need to compromise less. And you'll be backed by an organization that is as dedicated to the manufacturing and distribution of products as you are.

ERP LN gives you control over every aspect of your manufacturing supply chain, from design through to delivery, and beyond to your after-market service business. The result of years of development investment and focus on core industries, ERP LN delivers the deepest industry functionality available, including capabilities you simply won't find in other systems—all of which add up to more control, fewer modifications, and sharper information to make better decisions.

LN is proven across a wide range of engineering-based industries, including automotive, industrial equipment and machinery, high tech and electronics and aerospace and defense

System Highlights

- Planning.** This sophisticated planning engine consolidates multiple planning methods into one application and provides a holistic view and management of capacity and demand. Planning is complemented with capacity scheduling applications.
- Manufacturing.** The core of ERP LN, its manufacturing capabilities are supremely flexible and highly functional, supporting all manufacturing typologies and offering the ability to manage the most complex, highly engineered, or project-based configurations.
- Finance.** Multi-company, multi-site, multi-currency, multi-language-ERP LN's financial management capability supports the full range of financial operations. It delivers financial control with comprehensive analytics that give you the insight you need in every area of your business.
- Warehousing.** Using barcoding and the latest radio frequency identification (RFID) technology, Warehousing improves inventory accuracy, optimizes your warehousing resources, and helps you boost customer fulfillment.
- Freight Management.** Manage your own transportation needs and use your warehouse capacity more efficiently with better transportation planning and execution.
- Procurement.** With robust direct and indirect materials purchasing features, the Procurement module provides centralized and decentralized order and contract management capabilities, and supports the full range of procurement activities.
