

SyteLine ERP

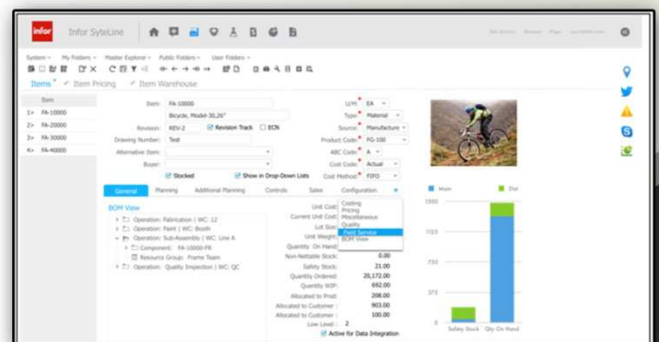

SyteLine ERP

SyteLine ERP is a solution that works for you, and lets you define your own business processes. Its framework gives you the ability to adapt the system to your business, rather than requiring you to force your business to fit the software. It adapts to new business requirements without incurring the high cost and delays involved in modifying or writing new code. This, in turn, allows you to rapidly adapt the system to your business, while continuing to receive new features and fixes.

SyteLine ERP's comprehensive functionality supports your business and operational challenges. Regardless of your mode or mixed-mode method of manufacturing, it has the business processes configured for you:

- ETO - Engineer to order projects manufacturer
- MTO/CTO - Make/configure to order
- MTS – Make to stock
- Repetitive
- Service management

SyteLine ERP provides flexible application screens, efficient data management and tactical processes, which adapt to your unique business requirements and ensure smooth, efficient process execution. Its advanced process automation technology handles routine tasks and lets you continuously improve processes in response to changing business conditions. Built-in scalability lets you add users, products, production sites or warehouses and make other changes as business grows.

SyteLine ERP provides the foundation to improve business efficiency, customer service, and overall manufacturing productivity for a broad range of industries, including metal fabrication, industrial equipment and machinery, and high-tech and electronics.

SyteLine ERP

- **Mixed mode manufacturing.** SyteLine accommodates true mixed mode manufacturing. From repetitive to engineer-to-order, you get the processes you need to accelerate production and meet customer demand more quickly.
- **Complex product configuration.** Integrated management tools ensure configured orders are accurate for the customer and feasible for the production department.
- **Advanced planning & scheduling (APS).** A fully integrated, lean advanced planning engine synchronizes material and capacity to customer orders. Continually monitor demand as it occurs, and update production schedules quickly, so you provide accurate and real-time capable-to promise estimates to your customers.
- **Materials and inventory management.** Automate the process of calculating and monitoring your inventory drivers—forecasts, safety stocks, and order size—to keep inventory low while avoiding shortages. You'll be able to shorten order entry time, eliminate duplicate orders, reduce costly data entry errors, and ensure your data is consistent.
- **Customer management.** An efficient method for managing the entire sales process, from customer lead origination and sales opportunity tracking through converting prospects to customers and placing the order. Tight integration between the front and back office streamlines sales and customer service processes, decreases the cost of sales and cost to serve, and ultimately increases revenue.
- **Role-based information.** All the information you need to do your job in a single screen. We have identified the specific daily tasks of specific career positions in our customers' organizations and defined the exact collection of information and actions that help them accomplish that job effectively. This collection is presented on a home page, the set of actions and data most closely associated with a specific, defined job in an organization, such as customer service, controller, or production planner. This helps you make faster, more efficient and informed decisions.

- **Better user experiences.** Easily customize the user interface to fit a particular industry, team, or an individual user. Add, remove, and edit fields, labels, and complete screens without having to call on IT for help. Get the information you need, when you need it, with easy-to-use grid forms. Plus, reduce or eliminate costly modifications to personalized features with upgrades to the system.
- **Microsoft-based system.** Familiar tools and common navigation translate to big time savings on implementation, customization, and training. Plus, SyteLine interfaces with Microsoft Project; the SyteLine calendar and task list tightly integrate with Outlook; and SharePoint pages can include charts and lists that display current Infor SyteLine data.
- **Flexible deployment options.** Subscribe to SyteLine through the Infor cloud computing platform to multiply the performance-enhancing and cost-cutting benefits. Go back and forth between the on-premises and cloud-based versions any time—or combine the two. Wherever you deploy, you benefit from a single sign-on, consistent user interface, and seamless data exchange.
- **Warehouse Mobility.** Fully automate key business processes, cut costs while improving profits, and enhance your ERP functions with modules such as Pallet Management. From receiving to shipping and everything in between, you can integrate Infor Barcode seamlessly with SyteLine version 8.0 and above. Quickly implement the application, plus configure and re-configure it as your business processes change.

Product History

Developed by experts in discrete manufacturing, SyteLine ERP has more than 25 years of experience built in. That means you can be confident you've got the tools you need to get the job done—and that you're getting it all from an experienced support team.
